### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Edmond A. DeFrank on 2/11/2009.

The application has been amended as follows:

(1) in the specification amend paragraph [0076], lines 7-15, delete “, or any other medium which can be used to carry or store desired program code in the form of computer-executable instructions or data structures and which can be accessed by a general purpose or special purpose computer. When information is transferred or provided over a network or another communications connection (either hardwired, wireless, or a combination of hardwired or wireless) to a computer, the computer properly views the connection as a computer- readable medium. Thus, any such connection is properly termed a computer-readable medium. Combinations of the above are also to be included within the scope of computer-readable media.”, it should read now “As noted above, embodiments within the scope of the present invention include program products comprising computer-readable media for carrying or having computer- executable instructions or data structures stored thereon. Such computer-readable media can be any available media that can be accessed by a general purpose or special purpose computer. By way of example, such computer-readable media can

Art Unit: 2625

comprise RAM, ROM, EPROM, EEPROM, CD-ROM or other optical disk storage, magnetic disk storage or other magnetic storage devices. Computer-executable instructions comprise, for example, instructions and data which cause a general purpose computer, special purpose computer, or special purpose processing device to perform a certain function or group of functions.”

***Allowable Subject Matter***

2. Claims 1, 4, 7-9, 11, 14 and 17-19 are allowed.
3. The following is an examiner’s statement of reasons for allowance:

Claims 1 and 11 are directed to a method of managing workflow in a commercial printing environment including a designer location and a computer readable-medium for executing the same. Claims 1 and 11 identify the uniquely distinct features of “automatically pre-flighting a digital file associated with the print job at the designer location, including automatically checking for common errors associated during a prepress stage, automatically revising incorrect printing instructions and automatically adding missing printing instructions to the received document file; automatically providing at the designer location a remote proofing function for a customer of the document file to be printed and automatically tracking the printing of the document file by continuously monitoring and updating a status of the document file to be printed; creating a press ready file at the designer location that encompasses the automatically pre-flighted and automatically proofed document file and both said print job and said job

Art Unit: 2625

ticket” The closest prior art Laverty et al. (US 6,429,947) teaches in column 10 and 11, “FIG. 3 shows a block diagram 300 of a generalized series of steps used in creating a print order. A customer 302 contacts a web site via the computer 304. The customer inputs data on the web site according to data prompts needed to generate the customer's desired print job. The system creates a Print Ready File (PRF), as shown in element 305. The PRF 306 is shown to the customer 302 for on-screen proofing 308 of various elements comprising the product. Once the order is approved, step 310 shows the order being sent to the printer. The PRF 306 is thereafter sent to printer as a print order 312, and the manufacturing (or printing) process begins. In the specific embodiment of an Internet-based ordering system, an Internet front-end provides a custom web site for a customer. The customer goes to the web site and selects a particular product to order. The web site loads a pre-configured order form for the selected product, and the customer enters the data they wish to appear on the business card. The web site then transmits the data to the system which generates the Print Ready File (e.g., as a unique PostScript file). The web site then takes this Print Ready File and uses it to create the preview layout. It does this by sending the Print Ready File to a viewer program (i.e. the Adobe Acrobat Distiller program), which reads the Print Ready File and creates a Portable Document Format (PDF) file. This file is then sent to the customer via the Internet and is viewed on the computer screen of the customer. In the preferred embodiment, the preview is displayed as a PDF file. While other types of files might be used (GIF, etc.) PDF files are preferred because first, they are extremely high in resolution quality, and second, a PDF file provides a customer with a well-known

Art Unit: 2625

format to process and view the preview layout.”, either singularly or in combination with other cited references fails to anticipate or render the above underlined limitations obvious (when used with all the claimed limitations).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LENNIN R. RODRIGUEZ whose telephone number is (571)270-1678. The examiner can normally be reached on Monday - Thursday 7:30am - 6:00pm EST.
